Re: Don't use nebulizers when fever prese

Ankit Parikh

to brianjaygould@gmail.com, Riding

Agreed. I know we don't really use nebs but there are times when they a increases the chance of aerosolizing the virus if they have it (regardless relatively critical patients and resorting to other medications to help. ALS transmission so if the patient absolutely needs a tube, keep ALS, but if y had a Windrows patient on Sunday that on a normal day would have me the hospital and I knew I could manager her airway en route to the hosp airway management there. Of course that isn't the best practice for the p Then my patient. Don't put additional providers in these situations if not : infected.

On Wednesday, March 25, 2020, 10:49:43 AM EDT, brianjaygould@gmail.com

It increases the chance of transmission of disease.
