

Chief Driver's Report – March 2018 – Krishna Jagannathan

101: coolant leak, was checked out by vci today and waiting for results

102 should be back today, came back from rear suspension surgery

103 hasn't been angered...this month

104 has front end damage probably from someone parking in a snowdrift and the front under engine plastic pulling away with the snow. Please be careful if you pull into a spot. And equally careful if you back in

New truck specs have been sent to driving committee members as of Monday. I am awaiting feedback from them before releasing to general membership. The new truck will be inverse colors - white truck with blue letters and blue stripes. Helps us preserve resale value - we may lose up to \$10k if we sell 101 to someone that needs to repaint it.

If any one is interested in being part of the committee to decide the new truck they can come to Wednesday night drill and tell me their thoughts

And finally the new truck bill with suggestions from membership including Brian and Dimitry is currently at \$298,854.00... fundraising ideas are welcome as the grant is \$240,000.

Ok last thing. If someone has the keys to the red toolbox or knows where we can find the keys please let me know. If nobody can find them we'll have to crowbar the tools out and buy a new toolbox.
